# **CHASSIS ENGINEERING GUIDELINES**

(ISSUE B, AUGUST 2019)

DESIGN GUIDELINES FOR: MODELS:

FUSO SHOGUN 6x4 FV70HK, FV74HK, FV74HT

FUSO HD 6x4 FV51SK, FV54SK, FV54ST

## **APPLICATIONS - FLAT DECK, CURTAINSIDER, TIPPER, TRACTOR**

These recommendations have been prepared for design engineers and body builders as a guide to assist when selecting and specifying chassis modification and/or body fitment.

These guidelines should be read in conjunction with the Mitsubishi Fuso Truck & Bus Body Equipment Mounting Directives available on the FUSO Body Builder Portal. Use these guidelines to determine any reinforcement details required for each application.

#### **FLAT DECK** U.D.L. Consider as a uniformly distributed load over whole or part of deck length. **CURTAINSIDER** Consider as a uniformly distributed load over whole or part of deck length in conjunction with point loads imposed by body and taillifts. **LOAD CENTRE** Determined as water level load 600mm above chassis. **TIPPER** AT LIFT OFF Point when body raised just clear of the chassis thus imposing two point loads on the chassis rails at hinge and hoist mount. AT MAX TIP Point when the body is raised to tip angle of 48°, (tail door closed) so loads act at the hoist mounting and hinge

LOAD CONSIDERATIONS

TRACTOR	
POINT LOAD	Consider as a concentrated load applied through the fifth wheel position ahead of rear axis.
SIDE LIFTER	Side lifter operation is a heavy duty application and may require additional frame engineering.

pivot points.

above chassis.

reinforcement.

Determined as water level load 600mm

Spreader work imposes higher frame loads and may require chassis

#### CHASSIS FRAME MATERIAL

Hot Rolled Steel, 540 MPa tensile, 380 MPa yield.

#### **MAXIMUM DESIGN STRESS**

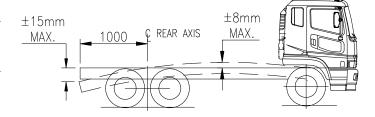

Recommended maximum design stress = 35%\* of chassis yield stress (133 MPa) for sections of frame that are unmodified or do not contain stress raisers. Appropriate allowance should be made for details in the frame that have been modified or contain stress raisers. Refer to the body builders manual for stress levels using static load applications.

For heavy duty, more arduous applications, eg., sidelifter, the stress levels should be reduced a further 33% to enhance frame durability.

Recommended heavy duty design stress = 2/3. Recommended max design stress = 90 MPa.

### **MAXIMUM CHASSIS DEFLECTION**

CASE 1	Between front and rear axis. Maximum permissible deflection: ±8mm.
CASE 2	Maximum permissible deflection: 15mm at 1000mm or greater, rear of rear axis.

This specification sheet applies to vehicles supplied by Fuso NZ for the New Zealand market. REF: J24267 / K-HDEUROSUB.DWG Copyright © Fuso NZ (2019)

**SPREADING** 

# NOTES:

- 01) THE FITTING OF A FIFTH WHEEL AND ANY WORK ON THE CHASSIS FRAME MUST BE CARRIED OUT IN ACCORDANCE WITH THE FUSO GUIDELINES FOR THIS MODEL AND GOOD INDUSTRY PRACTICE.

  02) FOR FIFTH WHEEL APPLICATIONS, A SUBFRAME, ATTACHMENT ANGLES, OR CHASSIS REINFORCEMENT IS REQUIRED, AND THIS REQUIREMENT SHOULD BE DETERMINED BY ENGINEERING CALCULATION AND ASSESSMENT USING NZSS450 AND THE FUSO **GUIDELINES.** 
  - 03) THIS DRAWING IS FOR USE AS A GUIDE ONLY, TO ASSIST WHEN SELECTING AND SPECIFYING CHASSIS MODIFICATION AND/OR BODY FITMENT.
