

# DELIVERING BETTER.

Generator Rentals' customer service manager Gary Lewis describes the company's truck fleet as the "lifeline of the business" – which makes it a potential lifeline for the entire North Island, supplying a range of back-up power solutions for a variety of situations

"We now have a mix of FUSO HD, Fighter and Canter, making up around a third of our fleet," says Gary. "They're good value for money and our drivers have been unanimous in saying they prefer driving FUSOs."

The latest addition is a 6x4 HD FV2447 Tractor. Fitted with a semi-trailer unit and 20ft semi-swing lift, the 24T unit is on standby as an emergency callout vehicle.

"A lot of our work is in response to requests for emergency power supply. Rain or hail, day or night, we're on call 24/7 and will

move heaven and hell to deliver what our customers need," says Gary.

"The HD is a good fit – it has a low tare weight, so with the trailer and crane there's still enough capacity for our 12-tonne, 22,000 volt power units, and plenty of power on the road.

"At the end of the day, you've got to have good trucks to maintain service expectations on both sides of the relationship.
